Interior Vision

From inspiration to implementation,
all in one place.

Project
[INTERIOR-VISION.DEV](https://interior-vision.dev)

A photograph of a wooden tray with a small potted plant and a white card, set against a background of pillows. The tray is made of light-colored wood and sits on a white surface. On the tray, there is a small white pot with a green succulent and a white card with a black border. In the background, there are several pillows: a large white one, a smaller white one, and a grey one. The overall aesthetic is clean and modern.

Executive Summary

Interior Vision is a web app that makes the process of building spec sheets faster and easier.

Status Quo

Interior Designers convert creative concepts into “Spec Sheets”, precise, order-ready instructions that govern the purchasing end of client delivery

Building spec sheets is:

- **Manual**
- **Repetitive**
- **Time consuming**

Existing products for interior designers do not address these issues, but exacerbate them - reflecting a market gap between inspiration tools and specification workflows.

The Solution

Intelligent, Collaborative Client Interfaces

Transforms mood boards into actual purchasable products in real-time, aligned with the client's taste, budget, and availability

Continuous, Reliable Price Tracking

Our browser plugin lets designers save any product with continuous monitoring of price, availability, and variants,

Affordable for Any Designer

Optimized for independent designers and small firms typically priced out of “all-in-one” suites

INTERIOR VISION

Our Product

Interior Vision accelerates the designer without the time, cost, or overhead of enterprise platforms.

What once took hours or outsourcing to specialists now takes minutes.

Target Audience

U.S.-based interior designers billing at least 6 project per year, on average

01

Interior Designers

Solo Practitioners benefit simple, focused, cost-effective solutions.

02

Interior Design Studios

Firms and design teams < 10 people benefit from collaboration tools between themselves and clients

03

Freelance decorators

Designers work far and beyond a one time home remodel - Real estate staging, party planning & events

Product Launch Roadmap

Research & Design

Design the product based on market research.

Testing & Feedback

Test the product and gather feedback from early users.

Product Refinement

Adjust the product based on feedback and testing results.

Marketing Strategy

Develop a strong marketing strategy to support the launch.

Official Launch

Launch the product to the market with a coordinated campaign.

Competitive Analysis

We're different because we're focused on providing tools that Interior Designers actually need at an affordable price, without the gimmicks, noise or complexity

Studio Designer

Steep learning curve, expensive, and lacks integration with creative tools

Houzz

Gates minimum viable tools behind expensive monthly plans; Prioritizes internal sales and lead generation over serving Interior Designers

Havenly

Focused on attracting independent contractors to use the platform rather than solving user pain points

Go To Market Plan

Visual-First Platform Marketing

Pinterest and Instagram function as the primary demand-creation channels because they align with how designers think, collect, and perform taste.

Drive Sales By Capturing Intent

Google Ads introduced to target searches describing user friction & cost-effective alternatives.

The Team

Brittany Been

Accredited Architect – provides
Subject-Matter Expertise on
Design, User Experience.
Leads Sales, Marketing, & Strategic
Partnerships

Appendix A: Total Addressable Market

Segment A — Independent Interior Designers

WHO: Self-employed interior designers and decorators. Typically solo, client-driven, heavy spec-sheet work.
BLS reports 45,000–60,000 interior designers (2024).
BLS also reports the share of interior designers who are self-employed: 21%

$87,100 \times 21\% \approx \mathbf{18,300}$ Independent Interior Designers

Segment C — Design-Adjacent Operators

These users do not self-identify as “interior designers,” but they perform identical specification and sourcing labor—which is the key criterion.. Sub-segments include:
Boutique architecture firms: ~20,000
Design-build consultants:~10,000
Freelance decorators: ~15,000

Subtotal: ~**60,000 Addressable User**

Segment B — Small Design Studios (2–10 employees)

Firms too small for enterprise software. Still manually managing specs, vendors, revisions

B.1: BLS OOH employer distribution for interior designers (2024):

- Specialized design services: 33%
- Architectural, engineering, and related services: 15%
- (Self-employed listed separately at 21%)

B.2: Census County Business Patterns (CBP) reports employment by establishment size class (e.g., <5, 5–9, 10–19...) for each NAICS industry.
Using the CBP 2022 U.S. file (national totals):

- ~52.4% of employment is in establishments with <10 employees.
- ~13.9% of employment is in establishments with <10 employees.

B3:

- **33% × 52.4%** (specialized design services small share)
- **15% × 13.9%** (A/E small share)
- **≈ 19.4%** of all interior designers

$87,100 \times 19.4\% \approx \mathbf{16,900}$ interior designers at Small Design Studios
